Modifying ng fatty acid metabolism and producing specific p n in plants, polymers in useful seeds for increasing

English.

CC is used to construct plasmids for the expression of the P. putida CC faoAB gene. The gene encodes an enzyme that may be used in the CC manipulating the metabolism of a plant, and comprises expressing a CC heterologous gene encoding fatty acid oxidation enzymes in the CC cytosol or plastids other than the peroxisomes, glyoxisomes or CC mitochondria of the plant. The method may be used to enhance the CC biological production of polyhydroxyalkanoates or novel oil compositions of a compounds in this way include Brassicas, maize, soybean, cottonseed, CC sunflower, palm, coconut, safflower, peanut, mustards, flax, tobacco and CC alfalfa. The method may also be used to production and therefore increase the production of biomass (leaves, Stalks) by plants.

Chymosin can be produced in a plant seed through introduction of a chimeric nucleic acid molecule, comprising a nucleic acid sequence encoding a chymosin polypeptide operatively linked to transcription regulator and terminator sequences, into a plant cell. The sequences are useful for producing plant seeds, in particular seeds of soybean, rape seed, sunflower, cotton, corn, tobacco, alfalfa, wheat, barley, oats, sorghum, Arabidopsis thaliana, potato, flax/linseed, safflower, oil palm, groundnut, Brazil nut, coconut, castor, coriander, squash, jojoba and rice.

The patent discloses hypoallergenic transgenic soybeans and recombinant cc expression constructs to lower soybean vacuolar protein, commonly known cc as p34 (Gly m Bd 30K or Gly m 1) and other allergens such as Gly m IA, cc Gly m IB, rGLY m3 or Glycinin Gl (alaBlb). The allergen content of the cc Soybean is reduced by sense suppression which is accomplished by using the expression construct that comprises a nucleic acid fragment encoding the allergen. The constructs are useful for producing hypoallergenic ct transgenic soybean plants which can be used to make hypoallergenic cc soybean products which can be used to make hypoallergenic cformulas) and animal feed applications. The oil made from seeds of the hypoallergenic transgenic soybean plants can be used as ingredients, cc as coatings, as salad oils, as spraying oils, as roasting oils, and cc and snack foods, confectionery products, syrups and toppings, sauces, batter and breading mixtures, baking mixes and doughs. The present cc sequence is a DNA encoding kunitz soybean trypsin inhibitor (KSTI cc or KTi3), a minor soybean seed allergen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant expression construct to lower allergen (e.g. Gly content of a soybean, comprises a nucleic acid fragment encoc allergen, useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be useful for producing soybean plants which can be us

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          into a cDNA copy which was inserted into plasmid pBR322 and cloned into E. coli strain K-12 MM 294 (ATCC 31446). The prorennin specific clones were used to screen for recombinant plasmids. Only two clones 5G3 and 15C5 were found to contain the whole prorennin sequence, with clone 5G5 having its complete coding sequence (shown here). The sequence was the same as the published sequence except for two silent mutations in codons 274 and 336 respectively, and a single mutation in codon 302 which converts the sequence to the B form of rennin. The product of prorennin, rennin is an active component of rennet which is used to clot milk in the process of making cheese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The prorennin (prochymosin) sequence was obtd.from mRNA from unweaned calf's stomach (abomasum). To identify rennin-specific mRNA species, hybridisation with rennin specific probes was performed using probes derived from the published amino acid sequence of prorennin (Foltmann et al., J. Biol. Chem. 254, 8447-8456 (1979)) (see AAQ23391, 2). Reverse transcriptase was used to transcribe mRNA to account the published was used to transcribe mRNA to account the published was used to transcribe mRNA to account the published was used to transcribe mRNA to account the published was used to transcribe mRNA to account the published was used to transcribe mRNA to account the published was used to transcribe mRNA to account the published was used to transcribe mRNA to account the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the published was the publish

The DNA is that of a mammalian gene (open reading frame) encoding chymosin. The gene was placed in operable linkage with the al-3 promoter (see AATO3005). The al-3 gene controls the production of geranyl geranyl pyrophosphatase (GGPP) synthetase. GGPP is a precursor for carotenoids and xanthophylls. It has been shown that exposure to light increases the transcription level of GGPP synthetase 15-45 fold. Light activates a number of genes in the common bread mould, Neurospora. This can be used to regulate the expression of genes encoding heterlogous proteins, e.g. chymosin, in recombinant production systems. Use of a light-regulated promoter is a simple and effective way to control expression and allows timing to be adapted to the physiological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               alpha-S1-casein gene in the prodn. of DNA constructs. The heterologous peptide/protein together with parts of the peptide or protein may also be human insulin-like growth factor I. The constructs provide high yields of the protein with simple recovery from the milk. Activation of the gene occurs only in the mammary gland. See also AAQ14050, AAQ14774-77.

                            The inventors claim the prochymosin gene comprising a nucleotide sequence from (a) the 1st codon (GCT) to the 365th codon (ATC), or (b) the 5th codon (CGG) to the 365th codon (ATC); and recombinant plasmids harboured by Escherichia coli strains deposited as FERM BP-262, -263 and -264. Any portion of the nucleotide sequence as described in AAN40055 can be used. Also claimed is a vector derived from plasmid pBR322. Typically plasmid pCR501 is obtd. from pCCT 2. The transcriptional direction of pCCT 3 is opposite to that of pCCT 2; it is clockwise in pCCT 2 (5' to 3') whereas counter

                                                                                                                                                         The inventors claim isolated chymosin (rennin) and prochymosin genes from calves, and plasmids contg. the genes which are capable of replicating in a prokaryotic organism. The prokaryotic organism is pref. an Escherichia species, esp. E. coli p Gx 1225 (NRRL B-15061). The microorganisms transformed by the plasmid are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CDS

                                                                                                                                                                            The DNA encoding prochymosin can be cloned into a plasmid (esp. from S. cremoris SK112) and used to produce large amts of the protein by recombinant DNA techniques. This could overcome the shortage of prochymosin due to shortage of calf stomachs and increasing cheese prodn. Prochymosin is also used in prodn. of yoghurt, butter and buttermilk. See also AAN91158-N91160.
                                            DNA fragment having region specific for lactic acid bacteria is contained in plasmid in microorganism used in prodn. of protein and food prodn. eg cheese.
